## EXPERIENCE

### Motivus 🌐

Aug 2021 — Apr 2025

Associate Developer Google Cloud Platform, Microservices, Databases, Git

Remote Work

- Led a team of 10 developers as both a Scrum Master and Developer for a recruit assessment platform.
- Added the ability to query for recruit's universities, groups, exams, scores and contact information in the database.
- Created new views for users, users by group, dynamic score graphs by group, user search, among others.
- Supervised the changes in the GitHub version control repository for our backend and frontend team.
- Participated in a git rebase to fix the conflicts between multiple team's development branches.
- Became the primary contributor to the Java Git repository, pitching in 60% of total new lines of code.
- Received access to Udemey courses (in use!) for consecutive years of high performance (Rating: 4 — Exceeds Expectations.)
- Joined a production incident team in Citibanamex via the contracting firm Motivus.

### Banca Empresarial Citibanamex (Contractor) 🌐

Dec 2021 — Feb 2025

Associate QA Developer Google Cloud Platform, Microservices, Databases, Git

Remote Work

- Supervised the release of 231 microservice updates by 32 development teams during the span of one year.
- Learned the functionality of 91 different microservices across 5 environments and 6 gateways.
- Verified the JDBC communication between microservices and their SQL/NoSQL databases using 61 query scripts.
- Analyzed 6 production incidents by tracing requests across microservices via their encrypted logs.
- Occasionally pair programmed to find the reasons behind the discrepancies in error formatting.
- Occasionally browsed through Git commits to find the line of code that reintegrated an already fixed bug.
- Occasionally connected via SSH to a Linux Server in order to update configuration files and run bash scripts.

## EDUCATION

### Instituto Tecnológico de Estudios Superiores de Monterrey (ITESM PUE) 🌐🌐

Professional License in Computer Science and Technology Engineering Identity Platform, App Engine, Linux, Git

- Started using Linux in 2018 and have been using it ever since (Ubuntu, Mint, Kali, Arch, Manjaro, Fedora).
- Made use of Google Cloud Platform by creating a login website using Identity Platform for the Web Applications Laboratory course.
- Made use of Google Cloud Platform by creating an online exam platform for the Web Applications Development course.
- Made use of Git in most programming projects (unlisted due to the use of technologies other than the Cloud's).

## CERTIFICATES

### Google Cloud Platform 🌐🌐

Professional Cloud Developer (384/384 lessons) Docker, Compute Engine, Cloud Datastore, Pub/Sub, Kubernetes Engine

- Deployed a Java development environment consisting of a Compute Engine virtual machine with preinstalled software libraries.
- Deployed an App Engine provisioned Cloud Datastore NoSQL document database to store answers.
- Deployed Identity Platform user authentication and domain to restrict access to Cloud Storage and Cloud Datastore.
- Deployed a backend service using Cloud Spanner and Cloud Pub/Sub that connected to Natural Language API for data analysis.
- Deployed and configured a Kubernetes Engine project by using a sample Docker Image with Cloud Build.
- Configured Kubernetes Engine to provide scalability as well as Blue-Green and Canary deployments.
- See the full list of badges (the first half is related to this course) here. [🔗](#)

### Google Cloud Platform 🌐🌐

Associate Cloud Engineer (306/306 lessons) Docker, App Engine, Cloud Storage, BigQuery, Kubernetes Engine, Cloud Run

- Explored Google Cloud Console's features; Marketplace, Networking, Virtual Machines, Load Balancing, Monitoring.
- Deployed a Cloud Storage solution implementing access control lists, rotating CSEK keys, file versioning and lifecycle management.
- Imported Cloud Storage web server logs from into BigQuery and made queries to the data using the Cloud Console.
- Deployed the same sample Docker image to App Engine, Kubernetes Engine and Cloud Run.
- Deployed a basic DevOps pipeline by using Cloud Build to automate deployments after each commit in Source Repositories.
- See the full list of badges (the second half is related to this course) here. [🔗](#)

## SKILLS

**Languages** Advanced English, Native Spanish

**Development** Google Cloud Platform, Cloud Console, Cloud Shell, Git

Linux (Fedora Linux), Github, Bitbucket, Source Repositories, TectiaSSH

**Concepts** Cloud Development, Object-Oriented Programming, Design Patterns, Version Control, Microservices, Databases

Gang of Four, SOLID, ACID, DDD, MVC, ORM, IoC, DI, CI/CD, JVM, JRE

**Principles** Authentication, Authorization, Blue-Green Deployment, Containerization, Canary Deployment

Functions, Identity Management, Images, Load Balancing, Publisher / Subscriber, Virtual Machines
